

CTEC Java Done Criteria

A task is only complete when it has been integrated with master (following the Continuous Integration principle) and has had its documentation filled out.

On completion, a feature must be tested on its current feature branch. If no bugs are found, the feature branch must be merged with its host branch and tested for bugs again. Finally, this process is repeated from host branch to master and tested yet again. When all has been successfully merged to master, the feature branch should be deleted.
